

What the Buzz is All About

Video walls have been around for decades. But their reliance on proprietary hardware led to unacceptably high cost and complexity, limiting their use and adoption mostly to Fortune 500 companies and large government agencies.

Over time, video wall products and solutions have evolved and matured. While some features have improved, cost and complexity have remained key obstacles and challenges placing video walls out of budget, out of reach and out of widespread use.

Until now.

We're Restarting the Conversation

Hiperwall is different. *Really different.* That's because **Hiperwall** is the most powerful video wall system available today that is software driven versus hardware driven, making it more scalable, more flexible, more usable and more aligned with your budget.

Hiperwall lets you create and deliver big, bold and dynamic high resolution content whenever, wherever and however you need it. It's that simple.

- No more special hardware.
- No more special PCs or monitors.
- No specialized training or skills required.
- No more limitations.
- And no, we're not kidding.

All you need is **Hiperwall** software, plus the ordinary displays, ordinary computers and ordinary network of your choice and voilà. You're on your way to creating, sizing, zooming, placing and sharing some of the best video wall content you've ever seen. Static pictures. Streaming videos. Live computer feeds. One image or 20. It's the video wall solution of the future right here today.

It's **Hiperwall®**. See the big picture®.

Hiperwall Components

The Hiperwall System

We couldn't say it if it wasn't true. **Hiperwall** is turning the traditional notion of video walls upside down. We've taken the complexity out and put the simplified in. Our high performance video wall software eliminates the excess hardware, software, cords and cables that come with old school legacy systems and lets you display a wide variety of high resolution content with unmatched speed, flexibility and functionality. On most any display and most any PC. Anytime. Anywhere.

And if all of that isn't enough, **Hiperwall's** Distributed Visualization features give you the ability to place content not only on one wall or in one room, but in multiple walls or rooms throughout an entire facility.

It's Hiperwall® See the big picture®

Hiperwall is a high performance video wall software solution that lets you display a wide variety of content with unmatched speed, flexibility and functionality in extremely high resolution.

- The **Video Wall** displays your content as directed by the Primary & Secondary Controllers including Screen Senders, Streamers and content stored in advance.

- **Primary & Secondary Controllers** use our simple drag and drop user interface to manage and arrange what, where and how everything is displayed on your video wall.

- **Screen Senders** run almost any application on any computer and display the output on your video wall.

- **Streamers** capture live video from any number of sources and put it on your video wall. Cable TV, Video Conferencing System, Live Camera. Or even a DVD Player. You name it. **Hiperwall** can stream it.
